WORK EXPERIENCE

Orion-VLSI-Technology **Rawabi, Ramallah**

Design Verification Engineer - Trainee Aug 2025 – Nov 2025

- Verified a 32-bit Arithmetic Logic Unit using the Universal Verification Methodology (UVM) in System Verilog.
- Built a fully reusable UVM testbench architecture including driver, monitor, scoreboard, and agent components, reducing future verification setup time by enabling component reuse.
- Applied constrained-random stimulus generation and functional coverage analysis to detect and report design bugs systematically using Verisium Debugger.

Gaza Sky Geeks **Remotely, Palestine**

Problem Solving – Trainee

Aug 2025 – Oct 2025

- Solved 50+ algorithmic and data structure challenges in a structured training program.
- Practiced competitive programming techniques applied to arrays, linked lists, recursion, and sorting algorithms, improving solution efficiency.

EDUCATION

Arab American University **Jenin, Palestine**

Bachelor Computer Systems Engineering Oct 2021 – Jul 2026

Alyamon Girls Secondary School Jun 2021

General Secondary Certificate (Tawjihi) | Grade: 93%

ADDITIONAL INFORMATION

Certifications:

- Frontend Development with React (Jul 2025) [GitHub]
- PHP Course – The Hope International Edu (Feb 2025) [GitHub]
- Problem Solving – Gaza Sky Geeks (Nov 2025) [GitHub]
- MERN Stack – Palestine Tech Hub (Oct 2025) [GitHub]
- Job Search Skills – EFE-Global (Apr 2025) [GitHub]
- IEEEXtreme 19.0 – Participation Certificate (Oct 2025) [GitHub]
- Design Verification – Orion VLSI (May 2026) [GitHub]

Technical Skills: C • C++ • System Verilog • x86 Assembly • Git / GitHub • Postman • Verisium Debugger • Linux

Projects:

4-Bit ALU – Computer Architecture, Digital Logic, Circuit Design [GitHub]

- Designed and simulated a 4-bit Arithmetic Logic Unit implementing basic arithmetic and logic operations using digital circuit design principles.

Fabric and Defect Detection System Using AI

- Developed an AI-based system for fabric type and defect detection, integrating computer vision with Raspberry Pi and a camera module to process fabric images and classify their condition

GitHub Documentation RAG Chatbot [GitHub]

- • Built a RAG pipeline for querying FastAPI documentation, implementing document chunking, embeddings, semantic retrieval with ChromaDB, and LLM-based answer generation using Google Gemini
